

THE AMERICAN MINERALOGIST, VOL. 54, JANUARY-FEBRUARY, 1969

CRYSTALLOGRAPHIC TABLES FOR THE RHOMBOHEDRAL  
CARBONATES: A CORRECTIONDONALD L. GRAF, *Dept. of Geology and Geophysics,  
University of Minnesota, Minneapolis 55455.*

Dr. Friedrich Lippmann of the University of Tübingen has pointed out that the oxygen  $x$  parameter for dolomite which I used in an earlier paper (Graf, 1961) is in error. The parameter should be  $0.2474 \pm 0.0068$  instead of  $0.2374 \pm 0.0068$ . The latter value was taken from Steinfink and Sans (see below), where it represents an undetected typesetting error.

The oxygen amplitude contributions for dolomite, given in Table 3 of the paper, are therefore wrong. The errors in calculated intensities shown in Table 4 and Figure 1 depend, of course, upon the relative importance of the oxygen contribution for each reflection. Because of the ready availability of computer programs for generating this information, I do not intend to prepare corrected tables.

## REFERENCES

GRAF, D. L. (1961) Crystallographic tables for the rhombohedral carbonates. *Amer. Mineral.*, **46**, 1283-1316.

## ERRATA

In H. Steinfink and F. J. Sans (1959) Refinement of the crystal structure of dolomite. *Amer. Mineral.* **44**, 681, Table 1, under Oxygen,  $x$ , for 0.2374 read 0.2474.
