

3. fine polishing on Texmet or Scandi-pellon with 0.1  $\mu\text{m}$  diamond and kerosene, at 125 rpm and 300 g pressure.

These preparations may be observed under reflected and/or transmitted light, which is of critical importance in order to ascertain the optical properties of very small particles.

THE AMERICAN MINERALOGIST, VOL. 55, MAY-JUNE, 1970

A SURVEY OF CHEMICAL BONDING IN SILICATE  
MINERALS BY X-RAY EMISSION SPECTROSCOPY: ERRATA

CHARLES G. DODD AND G. L. GLEN, *Owens-Illinois Technical Center, Toledo, Ohio 43607.*

Page 1303, the word gehlenite should be omitted from Fig. 5 caption.

Page 1306, line 37, should read: SiO bond stability.

Page 1309, line 1, should read: Figure 6.
