## Memorial of Elliot (Bud) Gillerman July 21, 1913-July 10, 1974

FRANK C. FOLEY

*Department of Geology, University of Kansas,  
Lawrence, Kansas 66045*

Elliot Gillerman, known to everyone as Bud, was born in St. Louis, Missouri, on July 21, 1913, and died in Lawrence, Kansas, on July 10, 1974. He had survived a heart attack in early 1971 but had returned to full physical activity. He was working at his desk at home preparing for a field trip to New Mexico when he was stricken with a fatal heart attack.

Bud received his B.A. and M.S. degrees in geology at Washington University, St. Louis,

Missouri, then worked as a topographic engineer and as a geologist with the U.S. Geological Survey, mostly in New Mexico. In 1953 he entered the University of Texas, Austin, where he received the Ph.D. degree in Geology in 1957. In 1957 he joined the faculty of the Department of Geology at the University of Kansas, Lawrence. The academic life suited him well and he contributed much to it. He taught courses in his special field of mineral deposits, both non-metalliferous and metalliferous, and a very popular course on

gemstones. He continued his field work, including consulting, until his death.

He became interested in Central and South American geology and in 1963 was a participant

in a Carnegie-sponsored exchange program between the University of Kansas and the University of Costa Rica. In 1964-65 he held a Fulbright Fellowship to the Universidad Nacional de Ingeniería in Lima, Peru, where he taught during the year. He and his family became fluent in Spanish.

In addition to his excellence as a field geologist and as a teacher, Bud was much interested in civic and church affairs and university administration. In 1967 the University of Kansas introduced an experimental College Within the College of Liberal Arts and Sciences to introduce entering freshmen to the large university and to advise students through their sophomore year. Bud Gillerman was chosen as the Director of that first College Within the College, known as North College. He did an excellent job of administration and was still Director at the time of his death.

In civic affairs he was an active member of Kiwanis International and of the Lawrence Chamber of Commerce and was a member of the Executive Board of the Kaw Council of the Boy Scouts of America. He was Chairman of the Church School Committee and a member of the Board of Lawrence Jewish Community Center and served as Vice-President of Sunflower Lodge of Bnai Brith.

Elliot (Bud) Gillerman was a vital and versatile man. He will be missed.

## **Memorial of William T. Granquist 1923-1974**

JOHN W. JORDAN

*Baroid Division, NL Industries, Houston, Texas*

On 30 September 1974 the scientific community lost a good friend, an esteemed colleague, and Editor-in-Chief of the journal *Clays and Clay Minerals*. Dr. William T. (Bill) Granquist lost an eighteen month battle with cancer, during part of which time he participated in the experimental program of the M. D. Anderson Institute for Tumor Research of the University of Texas. In typical fashion Bill referred to himself as an extension of the Anderson laboratory apparatus. He leaves his wife, Norine, and three children, Beth,

Victor, and Erik, as well as a host of close personal friends and associates.

Dr. Granquist, by education a physical chemist, had devoted his entire career to the clay minerals field, first with attapulgite at the Floridin Company laboratories; later with the smectite group at Mellon Institute as Baroid Fellow and at Baroid Division, N L Industries, laboratories as Assistant Technical Director. He was an ingenious experimenter and a prolific and most articulate idea man, as attested by numerous publications and
