STRUCTURE AND TWINNING OF SINGLE-CRYSTAL MgSiO_3 GARNET SYNTHESIZED
AT 17 GPa AND 1800°C

R. J. ANGEL, L.W. FINGER, R.M. HAZEN, M. KANZAKI, D.J. WEIDNER, R.C.
LIEBERMAN, D.R. VEBLEN

FOR DEPOSIT: TABLE 3

AMERICAN MINERALOGIST, 74, 3-4, 509-512

Supplementary Material for
Crystal structure and twinning of MgSiO₃ garnet

R.J. Angel, L.W. Finger, R.M. Hazen, ~~T. Gasparik~~, M. Kanzaki, D.R. Veblen
D.J. Weidner, R. C. Liebermann

Table 3: Observed and calculated structure factors for MgSiO₃ garnet refined in space group $I4_1/a$. Observed structure factors have been corrected for absorption, a contribution from a (110) twin fraction of 48%, and have been scaled to the calculated structure factors. Reflections marked with an asterisk are less-thans, and were excluded from the refinements. Refined structural parameters are reported in Table 2 of the paper.
