Memorial of Louis H. Ahrens, 1918-1990

S. Ross Taylor

For deposit: Bibliography of Louis H. Ahrens

American Mineralogist, 80, 3-4, 410-411.

## Bibliography of Louis Herman Ahrens.

1. The spectrochemical analysis of fluorine in phosphate rock. *S. African Chem. Inst. Jour.* 25, 18-32 (1942).
2. The use of a strontium subfluoride band in the spectrochemical analysis of fluorine. *S. African Jour. Sci.*, 39, 98 (1943)
3. Spectrochemical determination of wolfram in siliceous materials. *S. African Chem. Inst. Jour.* 26, 27-32 (1943).
4. The spectrochemical determination of iron in glass sands. *S. African Chem. Inst. Jour.* 27, 28-38(1944).
5. Trace elements in clays. *S. African Jour. Sci.*, 41, 152-160 (1945)
6. Quantitative spectrochemical examination of the minor constituents in pollucite. *Amer. Mineral.* 30, 616-622 (1945)
7. Isomorphous relationship between rubidium and thallium in igneous minerals. *Nature*, 155, 610 (1945).
- 8 (with W. R. Liebenberg) Geochemical studies on some of the rarer elements in South African minerals and rocks. I Lithium in mica and feldspar. *Trans. Geol. Soc. S. Africa*, 48, 75-82 (1945)
9. Geochemical studies on some of the rarer elements in South African minerals and rocks. II The geochemical relationship between thallium and rubidium in minerals of igneous origin. *Trans. Geol. Soc. S. Africa*, 48, 207-231 (1946).
10. Determination of the age of minerals by means of the radioactivity of rubidium. *Nature*, 157, 269 (1946).
11. (with W. R. Liebenberg) Qualitative spectrochemical analysis of minerals and rocks. *Trans. Geol. Soc. S. Africa*, 49, 133-154 (1946).
12. Analysis of the minor constituents in pollucite. *Amer. Mineral.* 32, 44-51 (1947).
13. The abundance of thallium in the Earth's crust. *Science*, 106, 268 (1947).
14. Geological age: the extreme antiquity of pegmatites from Manitoba. *Nature*, 160, 874-875 (1947).
15. The determination of geological age by means of the natural radioactivity of rubidium. *Trans. Geol. Soc. S. Africa*, 50, 24-54 (1947).
16. The geochemistry of radiogenic strontium. *Mineral. Mag.* 28, 277-295 (1948).
17. Molecular spectroscopic evidence of the existence of strontium isotopes  $Sr^{88}$ ,  $Sr^{87}$  and  $Sr^{86}$ . *Phys. Rev.* 74, 74-77 (1948).
18. (with R. D. Evans) The radioactive decay constants of  $K^{40}$  as determined from the accumulation of  $Ca^{40}$  in ancient minerals *Phys. Rev.* 74, 279-286 (1948).
19. Evidence of geological age against decay of Tin-115 to Indium-115 by electron capture. *Nature*, 162, 413-414 (1948)
20. The unique association of thallium and rubidium in minerals. *J. Geol.*, 56, 578-590 (1948).
21. Measuring geologic time by the strontium method. *Geol. Soc. Amer.*

20. Spectrochemical Analysis. 269 pp. Addison-Wesley, Cambridge, Mass. (1950).
21. What to expect from a standard spectrochemical analysis of common silicate rock types. *Amer. Jour. Sci.* 248-142-145 (1950).
22. (with W. R. Liebenberg) Tin and indium in mica, as determined spectrchemically. *Amer. Mineral.*, 31, 571-578 (1950).
23. (With L. G. Gorfinkle) The anundance of several relatively rare elements in igneous rocks of North America. *Science*, 112, 565 (1950)
24. (With L. G. Gorfinkle) Quantiative spectrochemical analysis of rubidium in lepidolite. *Amer. Jour. Sci.* 249, 451-456 (1951).
25. Quantiative spectrochemical analysis of silicate. *Spectrochim. Acta*, 4, 302-306 (1951).
27. (with A. M. Macgregor) Probable extreme age of pegmatites from Southern Rhodesia. *Science*, 114, 64-65 (1951).
28. The feasibility of a calcium method for the determination of geological age. *Geochim. Cosmochim. Acta.*, 1, 312-316 (1951).
29. Wavelength Tables of Sensitive Lines. 86 pp. Addison-Wesley, Cambridge, Mass. (1951).
30. (With W. H. Dennen and H. W. Fairbairn) Spectrochemical analysis of major constituent elements in rocks and minerals. *U. S. Geol. Surv. Bull.* 980, 25-52 (1951).
31. Spectrochemical analysis of some of the rarer elements in the granite and diabase samples. *U. S. Geol. Surv. Bull.* 980, 53-57 (1951).
32. The use of ionization potentials, pt. 1, Ionic radii of the elements. *Geochim. Cosmochim. Acta.*, 2, 155-169 (1952).
33. Anion affinity and polarizing power of cations. *Nature*, 169, 463 (1952).
34. The oldest rocks. *Trans. Amer. Geophys. Union*, 33, 193-195 (1952).
35. (with W. H. Pinson, Jr., and M. M. Kearns) Association of rubidium and potassium and their abundance in common igneous rocks and meteorites. *Geochim. Cosmochim. Acta.*, 2, 229-242 (1952).
36. Spectrochemical analysis as a tool in geochemistry. *Appl. Spectroscopy*. 6, 3 (1952).
37. The use of ionization potentials, Pt. 2, Anion affinity and geochemistry. *Geochim. Cosmochim. Acta.*, 3, 1-29 (1953).
38. (with H. W. Fairbairn and L. G. Gorfinkle) Minor element content of Ontario diabase. *Geochim. Cosmochim. Acta.* 3, 34-46 (1953).
39. Variations in isotopic abundances of strontium. *Phys. Rev.* 89, 631-632 (1953).
40. (with L. F. Herzog) Radiogenic  $Sr^{87}$  in biotite, feldspar and celestite. *Trans. Amer. Geophys. Union*, 34, 461-470 (1953).
41. (with W. Holyk) Potassium in ultramafic rocks. *Geochim. Cosmochim. Acta*, 4, 241-250 (1953).
42. (with W. H. Pinson and M. L. Franck) The abundances of Li, Sc, Sr, Ba and Zr in chondrites and some ultramafic rocks. *Geochim. Cosmochim. Acta.* 4, 251-260 (1953).
43. A fundamental law in geochemistry. *Nature*, 172, 1148 (1953).

44. The lognormal distribution of the elements (1) A fundamental law in geochemistry and its subsidiary. *Geochim. Cosmochim. Acta.*, 5, 49-93 (1954) (Pt. 2) *Ibid.* 6, 121-131 (1954), (Pt. 3) *Ibid.* 11, 205-212 (1957).
45. Elements in the Earth's crust. *Tech. Rev.* 56, 340 (1954).
46. Shielding efficiency of cations. *Nature*, 174, 644-645 (1954).
47. Distribution of minor elements in rocks. *Nature*, 174, 811-813 (1954).
48. The abundance of potassium, (p.128-132) in *Nuclear Geology* (ed. H. Faul) Wiley, N.Y. (1954).
49. The strontium method for determining geological age, (p.331-341) in *Nuclear Geology* (ed. H. Faul) Wiley, N.Y. (1954).
50. [Presentation of the Mineralogical Society of America Award to Louis H. Ahrens, by Esper S. Larsen, Jr.] Acceptance of the Mineralogical Society of America Award. *Am. Mineral.* 39: 302-303, port., (1954).
51. A note on the relationship between the precision of classical methods of rock analysis and the concentration of each constituent. *Mineral. Mag.* [London] 30: 467-470, (1954).
52. Quantitative Spectrochemical Analysis of Silicates. A scheme of quantitative DC arc analysis of the silicate minerals, rocks, soils and meteorites. London: Pergamon Press, 122 p., il., (1954). See also 107--1961g.
53. Uniquely old pre-Cambrian age determinations and some geological implications (a summary). *Geol. Assoc. Canada* 7/2: 25, (1955).
54. The convergent lead ages of the oldest monazites and uraninites (Rhodesia, Manitoba, Madagascar, and Transvaal). *Geochim. Cosmochim. Acta* 7: 294-300, (1955).
55. Implications of the Rhodesia age pattern. *Geochim. Cosmochim. Acta* 8: 1-15, (1955).
56. Analytical error as a possible cause of the  $t(206/238) > t(207/235) > t(207/206)$  age distribution. *Geochim. Cosmochim. Acta* 8: 299, (1955).
57. Oldest rocks exposed (p. 155-168), in Crust of the Earth--A symposium (A. Poldervaart, ed.). *Geol. Soc. Am., Sp. P.* 62: viii + 762 p., il., (1955).
58. The Sc abundance in chondrites and the neutron excess of principal isotopes. *Geochim. Cosmochim. Acta* 9: 273-278, (1956).
59. Some ionization potential variations and relationships. *J. Inorg. Nucl. Chem.* 2: 290-314, (1956).
60. Ionization potentials and the chemical binding and structure of simple inorganic crystalline compounds--I. Chemical binding. *J. Inorg. Nucl. Chem.* 3: 263-269, (1956).
61. (and Morris, D. F. C.) Ionization potentials and the chemical binding and structure of simple inorganic crystalline compounds--II. Crystal structure. *J. Inorg. Nucl. Chem.* 3: 270-280, (1956).
62. (with McKerrow, W. S., Taylor, S. R., and Blackburn, A. L.) Occurrence of caesium in fossils. *Nature* 178: 204, (1956).
63. (with McKerrow, W. S., Taylor, S. R., and Blackburn, A. L.) Rare alkali elements in trilobites. *Geol. Mag.* 93: 504-516, (1956).
64. Radioactive methods of determining geological age, *The Physical Society, Repts. Prog. Physics* 19: 80-106, (1956).
65. Radioactive methods for determining geological age (Chap. 3, p. 44-67), in Physics and Chemistry of the Earth, Vol. 1. (L. H. Ahrens, K. Rankama, and S. K. Runcorn, eds.). London: Pergamon Press, viii + 317 p., (1956).
66. Studies on the relative abundances of isotopes. *Geochim. Cosmochim. Acta* 11: 1-27, (1957).
67. The spectrograph in geochemistry and cosmochemistry. *Soil Science* 83: 33-41, (1957).

68. Lognormal-type distributions--III. *Geochim. Cosmochim. Acta* 11: 205-212, (1957).

69. (with Russell, R. D.) Additional regularities among discordant lead-uranium ages. *Geochim. Cosmochim. Acta* 11: 213-218, (1957).

70. Some features of the relationship between mass defect and mass number. *Roy. Soc. S. Africa, Tr.* 35/2: 109-113, (1957).

71. Some ionization potential variations and relationships--II. *J. Inorg. Nucl. Chem.* 4: 264-272, (1957).

72. A survey of the quality of the principal abundance data of geochemistry (p. 30-45), in *Physics and Chemistry of the Earth*, Vol. 2 (L. H. Ahrens, F. Press, K. Rankama, and S. K. Runcorn, eds.). London: Pergamon Press, viii + 259 p., (1957).

73. (with Deleon, G.) The distribution of Li, Rb, Cs and Pb in some Yugoslav granites. *Geochim. Cosmochim. Acta* 12: 94-96, (1957).

74. Variation of refractive index with ionization potential in some isostructural crystals. *Mineral. Mag. [London]* 31: 929-936, (1958).

75. (and Cherry, R. D.) Evidence for  $^6_2\text{He}$  clusters in nuclei. *Nature* 182: 1434-1435, (1958).

76. (and Edge, R. A.) Observations on the use of LaO bands for d-c arc spectrochemical analysis. *Spectrochim. Acta* 13: 304-307, (1959).

77. (with Edge, R. A., Brooks, R. R., and Amdurer, S.) Some reconnaissance observations on the combined use of ion-exchange enrichment and spectrochemical analysis for the determination of trace constituents in silicate rocks. *Geochim. Cosmochim. Acta* 15: 337-341, (1959).

78. (with Taylor, S. R.) The significance of K/Rb ratios for theories of tektite origin. *Geochim. Cosmochim. Acta* 15: 370-372, (1959).

79. The possible significance of the rare alkali metals for an understanding of the origin of eruptive rocks (p. 59-63), in *The geochemistry of the rare elements in relation to the problem of petrogenesis*. Moscow: U.S.S.R. Academy of Sciences, (1959).

80. (with Brooks, R. R. and Taylor, S. R.) The determination of trace elements in silicate rocks by a combined spectrochemical-anion exchange technique. *Geochim. Cosmochim. Acta* 18: 162-175, (1960).

81. (with Taylor, S. R.) Spectrochemical analysis (Chap. 4, p. 81-110), in *Methods in Geochemistry* (A. A. Smales and L. R. Wager, eds.). New York: Interscience Pub. Inc., vii + 464 p., il., (1960).

82. (and Fleischer, M.) Trace element content of the standard granite (G-1) and standard diabase (W-1), in *Second report on a cooperative investigation of the composition of two silicate rocks*. U. S. Geol. Surv., B. 1113: 83-111, tab., (1960).

83. (with Brooks, R. R.) The application of anion-exchange techniques to the spectrochemical detection of the noble metals in silicate rocks. *Spectrochim. Acta* 16: 783-788, (1960).

84. (and Edge, R. A. and Taylor, S. R.) The uniformity of concentration of lithophile elements in chondrites--with particular reference to Cs. *Geochim. Cosmochim. Acta* 20: 260-272, (1960).
85. Regularities involving  $^6\text{He}$  and  $^4\text{He}$  and their possible applications for nuclear structure. *J. Inorg. Nucl. Chem.* 16: 368-369, (1961).
86. (with Nicolaysen, L. O., Burger, A. J., and Tatsumi, T.) Age measurements on pegmatites and a basic charnockite lens occurring near Lütsov-Holm Bay, Antarctica. *Geochim. Cosmochim. Acta* 22: 94-98, (1961).
87. (with Brooks, R. R.) Some observations on the distribution of thallium, cadmium and bismuth in silicate rocks and the significance of covalency on their degree of association with other elements. *Geochim. Cosmochim. Acta* 23: 100-115, (1961).
88. (with Brooks, R. R.) The determination of indium and thallium in G-1, W-1 and other silicate rocks by a new technique. *Geochim. Cosmochim. Acta* 23: 145-147, (1961).
89. (and Edge, R. A. and Brooks, R. R.) The combination of ion exchange and spectrographic techniques for the estimation of trace elements in geological material. *S. Africa Indust. Chemist* 15: 102-105, (1961).
90. (and Edge, R. A.) The K/Cs ratio in some basic rocks. *Geochim. Cosmochim. Acta* 25: 91-94, (1961).
91. Regularities involving  $^6\text{He}$  and  $^4\text{He}$  and their possible implications for nuclear structure. *Roy. Soc. S. Africa, Tr.* 36: 163-178, (1961).
92. (and Taylor, S. R.) Spectrochemical Analysis--A treatise on the d-c arc analysis of geological and related materials, 2d edition. Reading, Mass.: Addison-Wesley Pub. Co., 454 p., il., (1961). See also 66--1954i.
93. (with Edge, R. A.) The determination of Sc, Y, Nd, Ce and La in silicate rocks by a combined cation exchange-spectrochemical method. *Anal. Chim. Acta* 26: 355-362, (1962).
94. (with Willis, J. P.) Some investigations on the composition of manganese nodules, with particular reference to certain trace elements. *Geochim. Cosmochim. Acta* 26: 751-764, (1962).
95. (with Edge, R. A.) Studies on the trace element content of some South African rocks. *Geol. Soc. S. Africa, Tr.* 65: 113-124, (1962).
96. Possible Zr-Hf fraction between earth and meteorites. *Geochim. Cosmochim. Acta* 26: 1077-1079, (1962).
97. (with Edge, R. A. and Dunn, J. D.) The determination of molybdenum in granitic and related rocks by a combined solvent extraction-spectrochemical technique. *Anal. Chim. Acta* 27: 551-558, (1962).
98. Lognormal-type distributions in igneous rocks--IV. *Geochim. Cosmochim. Acta* 27: 333-343, il., (1963).
99. Neutron numbers 98, 108 and 116. *Nature* 197: 993-994, (1963).
100. Negatively skewed distributions of silica and potassium in igneous rocks. *Nature* 198: 373-374, (1963).
101. The significance of the chemical bond for controlling the geochemical distribution of the elements. *Phys. Chem. Earth (V)*: 1-54, (1963).

102. (and Edge, R. A. and Brooks, R. R.) Investigations on the development of a scheme of silicate analysis based principally on spectrographic and ion exchange techniques. *Anal. Chim. Acta* 28: 551-573, (1963).

103. Lognormal-type distributions in igneous rocks--V. *Geochim. Cosmochim. Acta* 27: 877-890, il., (1963).

104. Element distributions in igneous rocks--VI. Negative skewness of SiO<sub>2</sub> and K. *Geochim. Cosmochim. Acta* 27: 929-938, (1963).

105. Element distributions in igneous rocks--VII. A reconnaissance survey of the distribution of SiO<sub>2</sub> in granitic and basaltic rocks. *Geochim. Cosmochim. Acta* 28: 271-290, il., (1964).

106. Aspects of the Geochemistry of the Rare Earths (Chap. 1, p. 1-29), in *Prog. Sci. Tech. Rare Earths*, Vol. 1. New York: The Macmillan Co., (1964).

107. Si-Mg fractionation in chondrites. *Geochim. Cosmochim. Acta* 28: 411-423, il., (1964).

108. Negatively skewed distributions of silica and potassium in igneous rocks. *Nature* 201: 1313, (1964).

109. Element distribution in igneous rocks. *Adv. Sci.*, (May 1964).

110. (with Willis, J. P. and Kaye, M.) The spectrochemical estimation of thallium in granites and in Mn nodules. *Appl. Spectroscopy* 18/3: 84-87, (1964).

111. Notes on Na-K fractionation in chondrites. *Geochim. Cosmochim. Acta* 28: 1869-1870, (1964).

112. The significance of the chemical bond for controlling the geochemical distribution of the elements, Pt. 1 (p. 1-54, il.), in *Physics and Chemistry of the Earth* (L. H. Ahrens, F. Press, and S. K. Runcorn, eds.). New York: The Macmillan Co., v + 398 p., (1964).

113. ~~██████████~~ Element distributions in igneous rocks. Volume to commemorate 100th birthday of V.I. Vernadsky; *U.S.S.R. Acad. of Sciences*, 293-300 (1964).
