

## ERRATA

**Surface transformations of platinum grains from Fifield, New South Wales, Australia** by S.G. Campbell, F. Reith, B. Etschmann, J. Brugger, G. Martinez-Criado, R.A. Gordon and G. Southam (May-June, vol. 100, pages 1236–1243, 2015, Article DOI: <http://dx.doi.org/10.2138/am-2015-4905>; Errata DOI: <http://dx.doi.org/10.2138/am-2015-E10077>).

Tulameenite is tetragonal rather than cubic. Hence, the sentence “SEM micrographs show fine-grained, 150 nm cubic Pt-Cu minerals suggesting the presence of sub-micrometer tulameenite (PtFe<sub>0.5</sub>Cu<sub>0.5</sub>; based on their cubic structure and chemistry” should read “SEM micrographs show fine-grained, 150 nm isometric Pt-Cu minerals suggesting the presence of sub-micrometer tulameenite (PtFe<sub>0.5</sub>Cu<sub>0.5</sub>; based on the square-cross sections and qualitative chemistry”. Elsewhere in the text “cubic” should be read as “(pseudo-)cubic”.

## Special advantages for MSA members publishing in *American Mineralogist*

- \* Free online color
- \* Free e-link of their paper
- \* Read preprints before publication

## American Mineralogist An International Journal of Earth and Planetary Materials

For membership and author info visit:  
<http://www.minsocam.org>

Plus: MSA members get discount pricing on *RiMGs* and other MSA publications & *Elements*
