Figures S1 to S7

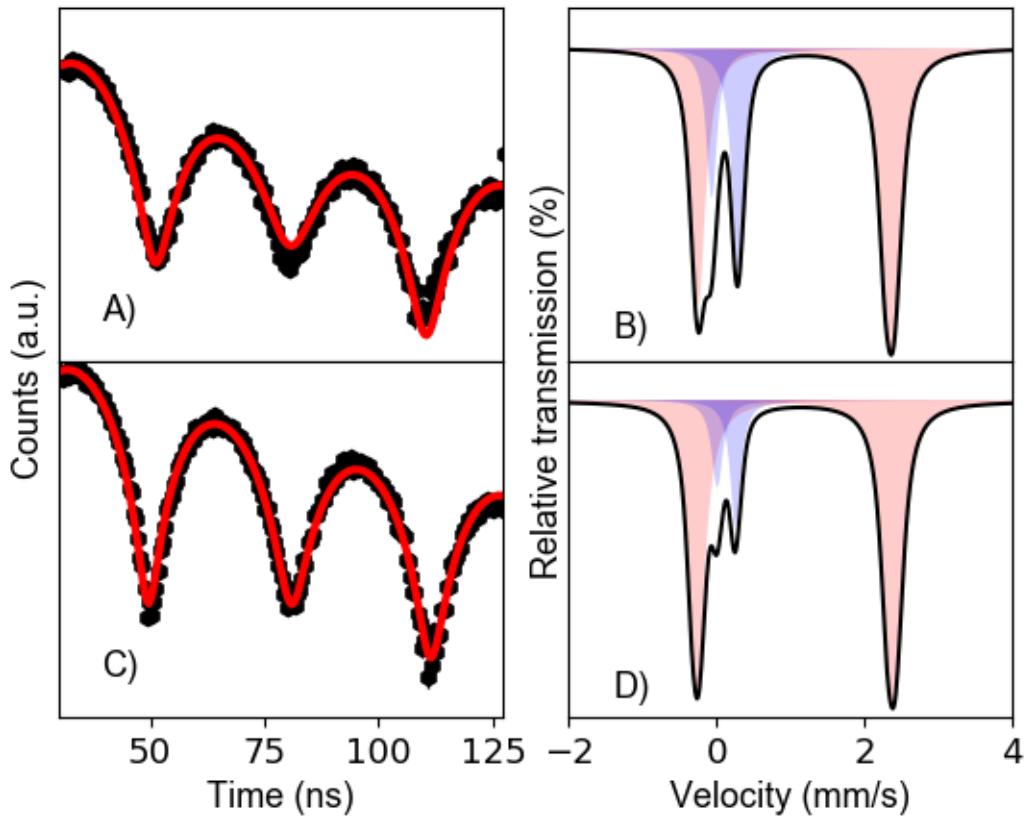

Table S1 to S24

**Introduction**

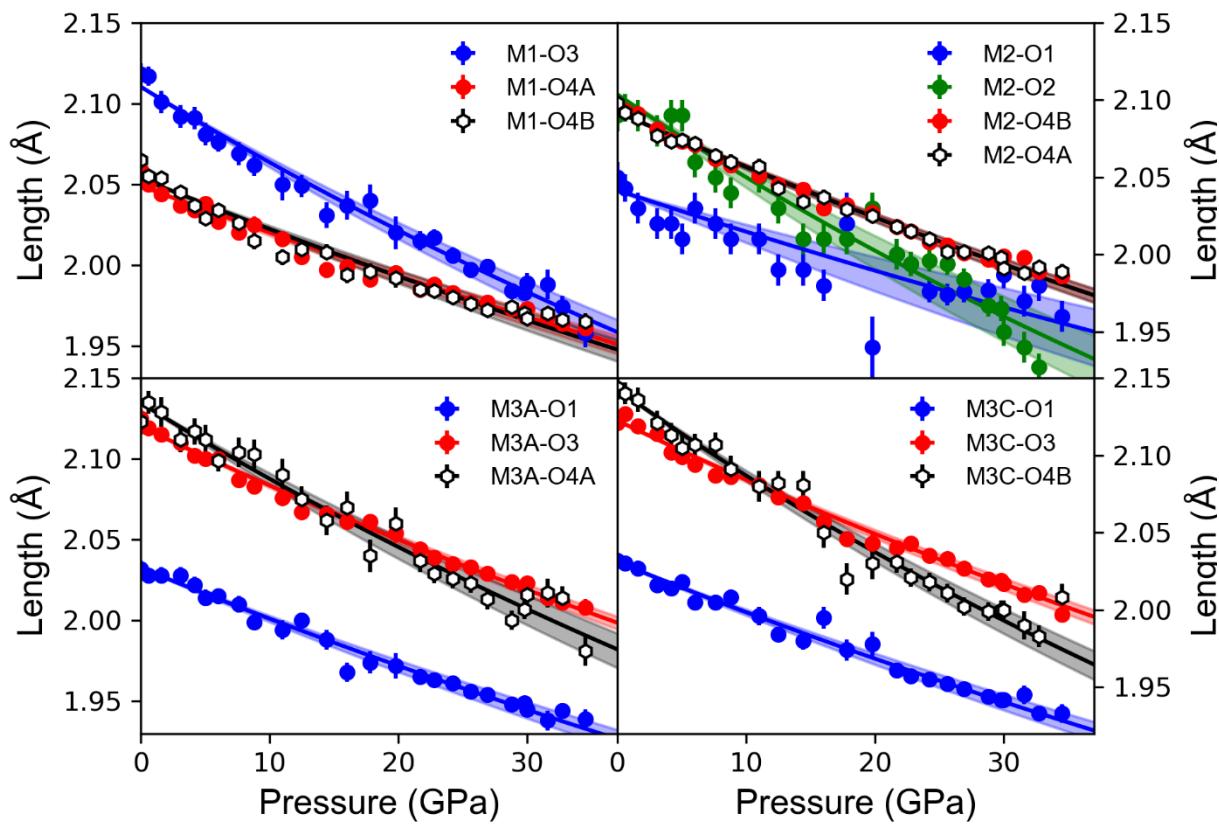

This supporting information provides seven supplementary figures and twenty-four supplementary tables which are not included in the main text.

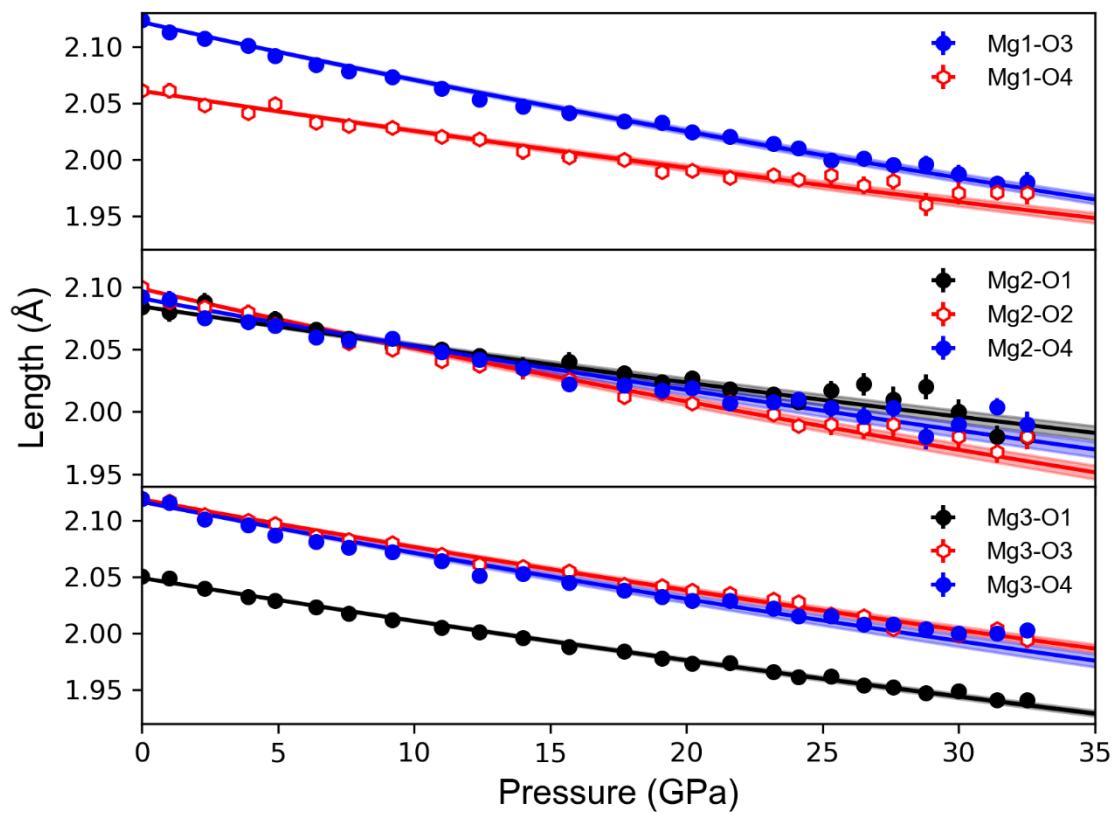

**Figure S1.** Crystal structure of wadsleyite, including orthorhombic (*Imma*) symmetry (A, B, C) and monoclinic (*I2/m*) symmetry (D, E, and F). Oxygen atoms are denoted by red spheres, magnesium and iron by orange spheres, silicon by blue spheres, and hydrogen by white spheres. Hydrogen positions are from Purevjav et al. (2016). Figures were made using VESTA (Momma and Izumi 2011).

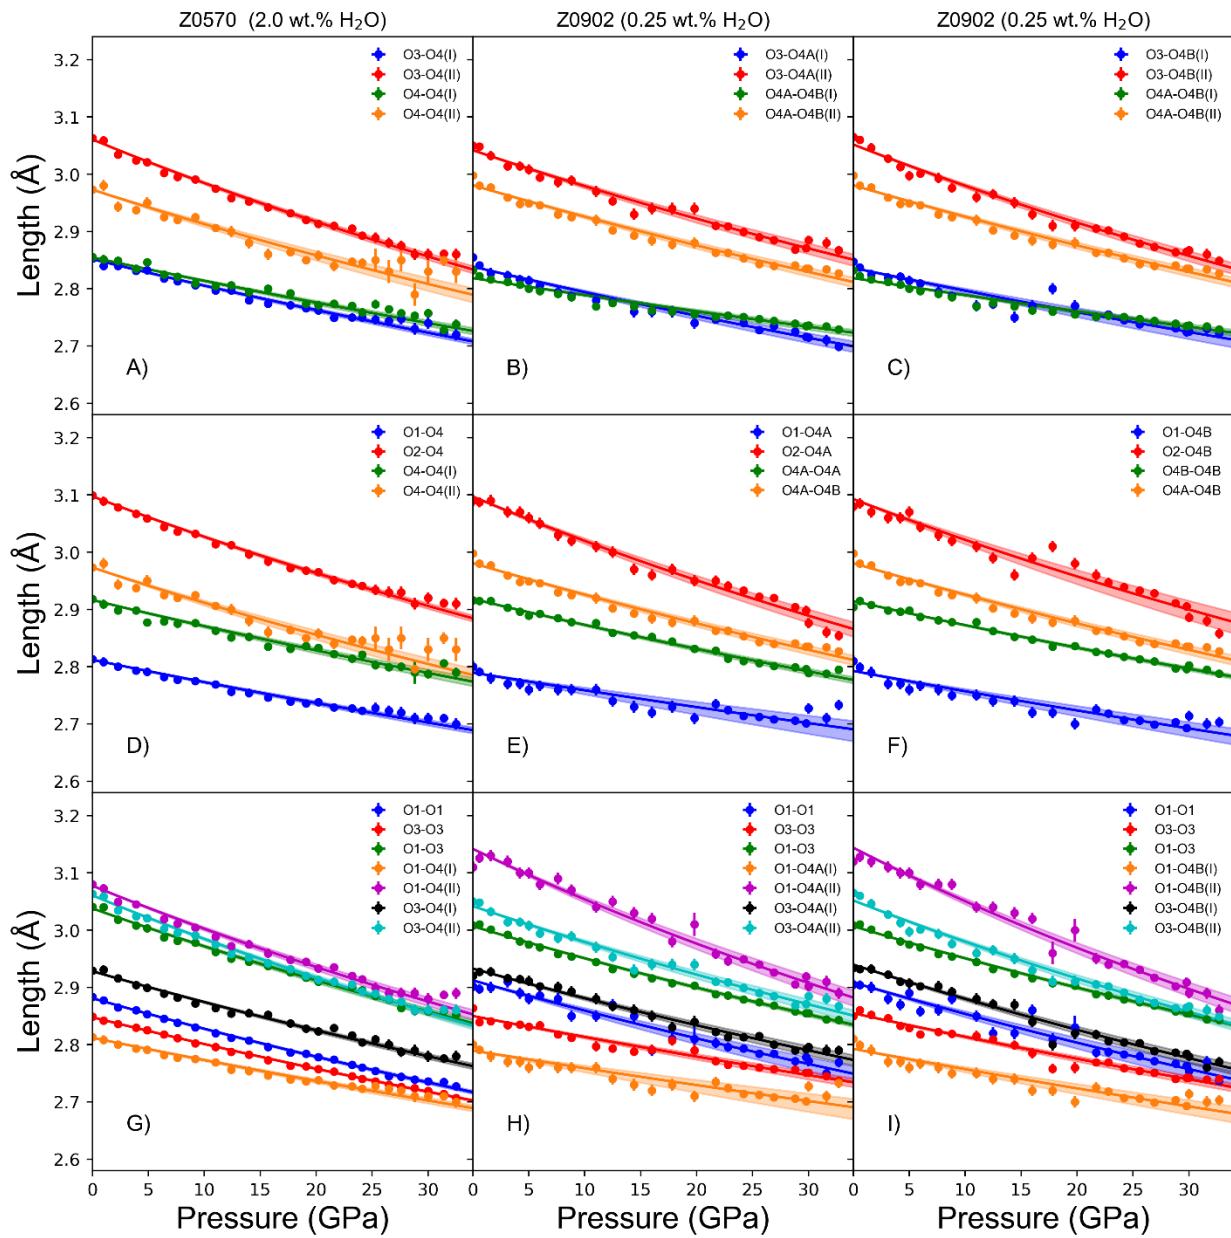

**Figure S2.** Time-domain synchrotron Mössbauer spectrum for Z0570 (A) and the energy domain spectrum of the best-fit hyperfine model parameters (B). The blue- and pink-shaded doublets correspond to Fe<sup>3+</sup> and Fe<sup>2+</sup> sites, respectively. The fit ratio of these doublets provides the  $\text{Fe}^{3+}/\square\text{Fe} = 0.247(11)$  for this sample. Time-domain synchrotron Mössbauer spectrum for Z0902 (C) and energy domain spectrum of the best-fit hyperfine model parameters (D). The blue- and pink-shaded doublets correspond to Fe<sup>3+</sup> and Fe<sup>2+</sup> sites, respectively, providing a value of  $\text{Fe}^{3+}/\square\text{Fe} = 0.128(10)$ .

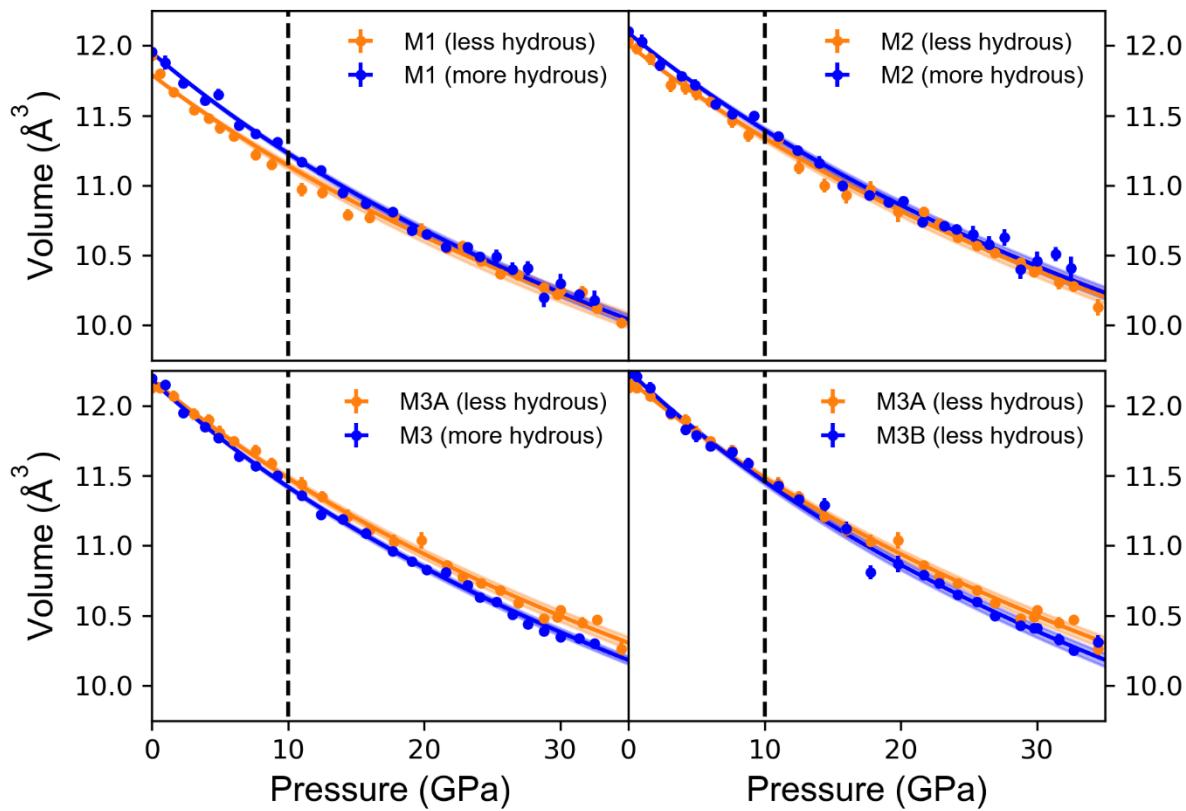

**Figure S3.** Bond length versus pressure in slightly hydrous wadsleyite (Z0902). The lines show the second-order BM-EOS fit.

**Figure S4.** Bond length versus pressure in very hydrous wadsleyite (Z0570). The lines show second-order BM EOS fit to each M–O bond length and the shaded regions and the shaded regions show the 95% prediction band .

**Figure S5.** O–O distance versus pressure in very hydrous wadsleyite around the M1 site (A), M2 site (D) and M3 site (G) and slightly hydrous wadsleyite around the M1 site with O4A oxygen site (B), M1 site with O4B oxygen site (C), M2 site with O4A oxygen site (E), M2 site with O4B oxygen site (F), M3A site (H) and M3C site (I). The lines show second-order BM-EOS fit and the shaded regions show the 95% prediction band.

**Figure S6.** Octahedral volume versus pressure of the M1, M2 and M3 sites of very hydrous wadsleyite and M1, M2, M3A and M3B sites of slightly hydrous wadsleyite. The lines show the fit second-order BM-EOS and the shaded regions show the 95% prediction band.

**Table S1.** Crystal structure refinement data for wadsleyite (Z0902).

**Table S6.** Lattice parameters of orthorhombic wadsleyite (Z0902) as a function of pressure. The  $\beta$  angles in this table have been fixed at  $90^\circ$  and therefore this table does not reflect the best-fit structure refinement parameters from this study. Values in parentheses are uncertainties on the last digit.
