

ACKNOWLEDGEMENTS

This book would not have been written without the support of the National Science Foundation through grant DUE-9554635 from the Division of Undergraduate Education, National Science Foundation. The Teaching Mineralogy Workshop funded by the grant was organized by Jack Cheney and Peter Whelan along with the editors. Ann Pufall and Kathy Bartus provided invaluable administrative support for both the workshop and the preparation of this volume. Participants at the workshop have served as authors, instructors, students, editors, advisors, and field testers of these teaching exercises. The mineralogical community is fortunate to claim so many talented and dedicated teachers. Finally, we thank the Mineralogical Society of America for its support of these efforts through the publication and distribution of this book.
