## TABLE OF CONTENTS

### **1 Recent Exploration of the Moon: Science from Lunar Missions since 2006**

*Lisa R. Gaddis, Katherine H. Joy, Ben J. Bussey, James D. Carpenter,  
Ian A. Crawford, Richard C. Elphic, Jasper S. Halekas, Samuel J. Lawrence, Long Xiao*

1. INTRODUCTION .....	2
2. HISTORIC LUNAR MISSIONS .....	2
2.1. Early lunar missions (1959–1972): Luna, Zond, Ranger, Surveyor, Apollo .....	3
2.2. Later lunar missions (1989–2003): Galileo, Hiten, Clementine, Lunar Prospector, SMART-1 .....	5
2.3. New results from older lunar data .....	7
3. LUNAR MISSIONS SINCE 2006 .....	8
3.1. SELENE/Kaguya .....	9
3.2. Chang'E 1 .....	12
3.3. Chandrayaan-1 .....	13
3.4. Lunar Reconnaissance Orbiter (LRO) .....	15
3.5. Lunar Crater Observation Sensing Satellite (LCROSS) .....	18
3.6. Chang'E 2 .....	19
3.7. Acceleration, Reconnection, Turbulence and Electroynamics of the Moon's Interaction with the Sun (ARTEMIS) .....	20
3.8. Gravity Recovery and Interior Laboratory (GRAIL) .....	21
3.9. Lunar Atmosphere and Dust Environment Explorer (LADEE) .....	22
3.10. Chang'E 3 .....	23
3.11. Chang'E 4 .....	25
3.12. Beresheet .....	27
3.13. Chandrayaan-2 .....	27
3.14. Chang'E 5 .....	28
4. FUTURE LUNAR MISSIONS: 2020 AND BEYOND .....	29
5. NEXT STEPS TO THE MOON .....	32
REFERENCES .....	35
APPENDIX—RECENT DEVELOPMENTS .....	51

## 2

### **Origin of the Moon**

*Robin M. Canup, Kevin Righter, Nicolas Dauphas, Kaveh Pahlevan, Matija Čuk,  
Simon J. Lock, Sarah T. Stewart, Julien Salmon, Raluca Rufu, Miki Nakajima,  
Tomáš Magna*

1. INTRODUCTION .....	53
2. NEW DATASETS .....	54
2.1. Volatiles—H, C, S, N, Cl, F, alkalis, and volatile metals .....	54
2.2. Importance of isotopes .....	57
2.3. Distinctive isotopic systems (O, H, Ti, Ca, and Cr) .....	58
2.4. Isotopes that are volatile K, Rb, Cu, Zn, Ga, Sn, and/or may participate in core formation (Si, Fe, V).....	61
2.5. Radiogenic isotopes Hf–W, Sm–Nd, and Lu–Hf: Constraints on Earth–Moon relationships and formation chronology .....	63
2.6. Summary .....	65
3. GIANT IMPACT SCENARIOS .....	66
3.1. General constraints and methods.....	66
3.2. Canonical impact.....	68
3.3. Hit-and-run impact .....	68
3.4. Fast-spinning Earth impact.....	69
3.5. Half-Earth impact.....	69
3.6. General high-angular momentum/high-energy impact .....	70
3.7. Multiple impacts .....	70
4. POST-IMPACT EVOLUTION .....	70
4.1. Mixing during a Moon-forming impact and Earth’s mantle heterogeneity .....	71
4.2. Disk–planet equilibration .....	72
4.3. Proto-lunar disk evolution .....	73
4.4. Evolution of a synestia .....	75
4.5. Accretion of the Moon .....	78
4.6. Volatile loss and retention after the impact .....	79
4.7. Angular momentum transfer mechanisms.....	80
5. FACTORS THAT INFLUENCE MOON ORIGIN SCENARIO LIKELIHOODS .....	83
5.1. Likelihood of an Earth-like composition impactor .....	83
5.2. Potential for compositional equilibration between the protoearth and protolunar material.....	84
5.3. Constraints on large-scale modification of the Earth–Moon angular momentum .....	86
5.4. Needed conditions for proposed Moon-forming impact scenarios .....	87
5.5. Discussion .....	91
6. CONCLUSIONS AND OPEN ISSUES .....	91
REFERENCES .....	93

### 3

#### Magmatic Evolution I: Initial Differentiation of the Moon

*Amy M. Gaffney, Juliane Gross, Lars E. Borg, Kerri L. Donaldson Hanna, David S. Draper, Nick Dygert, Lindy T. Elkins-Tanton, Kelsey B. Prissel, Tabb C. Prissel, Edgar S. Steenstra, Wim van Westrenen*

1. THE CASE FOR A LUNAR MAGMA OCEAN .....	104
1.1. Challenges to the lunar magma ocean model and potential alternatives .....	105
2. GLOBAL DISTRIBUTION OF POTENTIAL PRIMORDIAL DIFFERENTIATION PRODUCTS .....	107
2.1. Large scale lunar crustal surface heterogeneity and distinct terranes .....	107
2.2. Small scale lunar crustal surface observations .....	108
2.3. Remote observations of lateral structure and composition of the exposed lunar surfaces .....	108
3. EXPERIMENTAL CONSTRAINTS ON MAGMA OCEAN SOLIDIFICATION .....	110
3.1. Lunar magma ocean bulk composition.....	110
3.3. Simulating two-stage crystallization .....	112
3.4. Simulating one-stage (fully fractional) crystallization.....	115
3.5. Comparison of experimental results with numerical model results .....	116
4. CONSTRAINTS ON LUNAR DIFFERENTIATION FROM PHYSIOCHEMICAL MODELING .....	118
4.1. Size and composition of the core.....	118
4.2. Depth of magma ocean.....	120
4.3. The physiochemistry of solidification on the Moon and crystal behavior .....	121
4.4. What overturned and what was the resulting compositional and thermal structure? .....	123
4.5. Duration of magma ocean crystallization and timing of cumulate overturn .....	124
5. CHRONOLOGY OF LUNAR DIFFERENTIATION .....	125
5.1. Age measurements of individual samples .....	126
5.2. Model ages of lunar differentiation .....	129
6. SYNTHESIS AND FUTURE DIRECTIONS .....	133
ACKNOWLEDGMENTS.....	135
REFERENCES .....	135
APPENDIX—RECENT DEVELOPMENTS .....	145
REFERENCES .....	145

### 4

#### Magmatic Evolution II: A New View of Post-Differentiation Magmatism

*Charles Shearer, Clive R. Neal, Timothy D. Glotch, Tabb C. Prissel, Aaron S. Bell, Vera Assis Fernandes, Lisa R. Gaddis, Bradley L. Jolliff, Matthieu Laneuville, Tomáš Magna, Justin Simon*

1. INTRODUCTION AND SCOPE.....	147
1.1. Introduction .....	147
1.2. Summary of post-differentiation lunar magmatism in New Views of the Moon (NVM1, Jolliff et al. 2006).....	147
2. EARLIEST STAGES OF POST-DIFFERENTIATION MAGMATISM.....	148
2.1. Introduction .....	148
2.2. Provenance of the highlands Mg-suite .....	148

2.3. Incorporation of lunar meteorites and remote sensing methods.....	151
2.4. Updated chronology and new criteria for age assessment.....	153
2.5. Synthesis of recent observations .....	158
3. KREEP BASALTS.....	158
3.1. Introduction .....	158
3.2. Ages of KREEP basalt formation.....	160
4. MARE BASALTIC MAGMATISM .....	161
4.1. Introduction .....	161
4.2. Summary of observations .....	161
5. SILICIC–FELSIC MAGMATISM .....	177
5.1. Summary of observations .....	177
5.2. Implications for the origin of silicic–felsic magmatism.....	183
6. THERMAL EVOLUTION OF THE MOON AND ITS BEARING ON LUNAR MAGMATISM.....	188
6.1. Introduction .....	188
6.2. Long term evolution—post-magma ocean .....	188
6.3. Integrated mantle modeling.....	189
6.4. Thermal structure implications.....	190
7. QUESTIONS AND FUTURE WORK .....	191
ACKNOWLEDGMENTS.....	191
REFERENCES .....	192

## **5 Lunar Magnetism**

**Mark A. Wieczorek, Benjamin P. Weiss, Doris Breuer, David Cébron, Mike Fuller,  
Ian Garrick-Bethell, Jérôme Gattacceca, Jasper S. Halekas, Douglas J. Hemingway,  
Lon L. Hood, Matthieu Laneville, Francis Nimmo, Rona Oran, Michael E. Purucker,  
Tina Rückriemen, Krista M. Soderlund, Sonia M. Tikoo**

1. INTRODUCTION .....	207
2. PALEOMAGNETISM.....	209
2.1. Lunar magnetic mineralogy.....	209
2.2. Acquisition of magnetization.....	210
2.3. Paleointensity methods.....	212
2.4. Paleointensity results .....	214
3. CRUSTAL MAGNETISM.....	216
3.1. Magnetic field measurements and models.....	216
3.2. Global properties of crustal magnetism.....	217
3.3. Magnetic signature of impact basins .....	220
3.4. Magnetic paleopoles.....	222
4. DYNAMO GENERATION.....	224
4.1. Thermal dynamos .....	224
4.2. Core crystallization.....	227
4.3. Dynamos driven by mechanical forcing.....	228
5. SYNTHESIS .....	230
6. OUTSTANDING QUESTIONS .....	232
7. CONCLUSIONS.....	234
ACKNOWLEDGMENTS.....	234
REFERENCES .....	234
APPENDIX—RECENT DEVELOPMENTS .....	241

## 6

### The Structure and Evolution of the Lunar Interior

*Jeffrey C. Andrews-Hanna, Renee C. Weber, Ian Garrick-Bethell,  
Alexander J. Evans, Walter S. Kiefer, Robert E. Grimm, James T. Keane,  
Matthieu Laneuville, Yoshiaki Ishihara, Shunichi Kamata, Isamu Matsuyama*

1. INTRODUCTION AND OVERVIEW .....	244
2. LUNAR STRUCTURE AS A CONSEQUENCE OF THE MAGMA OCEAN.....	245
3. SHALLOW STRUCTURE: CRUST AND UPPERMOST MANTLE .....	247
3.1 Bulk properties and vertical structure of the crust.....	247
3.2. Global-scale patterns .....	253
3.3. Regional-scale structure of the crust: South Pole-Aitken, Procellarum, and the maria .....	258
3.4. Mesoscale structure of the crust: Impact basins and ancient tectonics .....	260
3.5. Small-scale structure of the crust: Impacts, intrusions, and more.....	264
4. DEEP STRUCTURE: MANTLE AND CORE .....	268
4.1. Upper mantle structure .....	268
4.2. Lower mantle structure.....	270
4.3. Moonquakes .....	271
4.4. Mantle structure—electromagnetic constraints.....	272
4.5. Core .....	273
5. THERMAL AND GEODYNAMIC EVOLUTION .....	273
5.1. Lunar heat flow and subsurface temperatures .....	274
5.2. Thermochemical evolution .....	276
6. SUMMARY AND FUTURE DIRECTIONS .....	279
6.1. Summary .....	279
6.2. Outstanding questions and future directions .....	281
ACKNOWLEDGMENTS.....	282
REFERENCES .....	282

## 7

### The Evolution of the Lunar Crust

*Stephen M. Elardo, Carle M. Pieters, Deepak Dhingra, Kerri L. Donaldson Hanna,  
Timothy D. Glotch, Benjamin T. Greenhagen, Juliane Gross, James W. Head,  
Bradley L. Jolliff, Rachel L. Klima, Tomáš Magna, Francis M. McCubbin, Makiko Ohtake*

1. INTRODUCTION .....	293
2. NEW SAMPLE OBSERVATIONS AND GLOBAL ASSESSMENTS .....	295
2.1. The global primary crust .....	296
2.2. Defining the Mg-suite: The earliest phase of post-LMO crust-building magmatism .....	297
2.3. Mg-spinel-bearing lithologies .....	298
2.4. Mafic components of crustal lithologies.....	300
2.5. The distribution of Th in the global lunar crust.....	303
2.6. The non-mare interior of the South Pole-Aitken Basin.....	304
2.7. Non-mare silicic magmatism.....	304
2.8. Mare volcanism and evolution of secondary crust .....	306

2.9. Constraints on crustal evolution from non-traditional stable isotopes .....	309
2.10. Magmatic volatiles (H, F, and Cl) and their isotopes in the lunar crust .....	313
2.11. Alteration of the lunar crust .....	316
3. NEW INSIGHTS INTO THE EVOLUTION OF THE LUNAR CRUST .....	318
3.1. The significance of PAN in the global crust .....	318
3.2. The Mg-suite: A global or regional crust-building event? .....	319
3.3. Composition of the deep crust .....	320
3.4. Mafic components of the global primary crust .....	320
3.5. Composition of the crust/mantle exposed by SPA and other basins .....	322
4. UNRESOLVED QUESTIONS AND FUTURE DIRECTIONS .....	323
ACKNOWLEDGMENTS .....	324
REFERENCES .....	325

## 8

### **Lunar Impact Features and Processes**

*Gordon R. Osinski, H. Jay Melosh, Jeff Andrews-Hanna, David Baker, Brett Denevi, Deepak Dhingra, Rebecca Ghent, Paul O. Hayne, Patrick Hill, Peter B. James, Steven Jaret, Brandon Johnson, Thomas Kenkmann, David Kring, Prasun Mahanti, David Minton, Catherine D. Neish, Greg Neumann, Jeff Plescia, Ross W. K. Potter, Jim Richardson, Elizabeth A. Silber, Jason M. Soderblom, Michael Zanetti, Nicolle Zellner*

DEDICATION .....	340
1. PREFACE .....	340
2. THE BASICS OF IMPACT CRATERING .....	340
2.1. Contact and compression .....	340
2.2. Excavation .....	342
2.3. Modification .....	342
2.4. Basic scaling of crater dimensions .....	343
3. METHODS OF STUDY .....	343
4. MORPHOLOGY AND MORPHOMETRY OF LUNAR IMPACT CRATERS .....	344
4.1. Simple craters .....	345
4.2. Transitional craters .....	347
4.3. Complex craters .....	348
4.4. Peak-ring basins .....	349
4.5. Mascons and multi-ring basins .....	350
5. EJECTA DEPOSITS .....	351
5.1. Proximal ejecta deposits .....	353
5.2. Self-secondary cratering .....	355
6. IMPACTITES: THE PRODUCTS OF IMPACT EVENTS .....	355
6.1. Shock Metamorphism .....	356
6.2. Impactites .....	357
7. CONCLUDING REMARKS .....	363
ACKNOWLEDGMENTS .....	364
REFERENCES .....	364

### Impact History of the Moon

*Barbara A. Cohen, Carolyn H. van der Bogert, William F. Bottke, Natalie M. Curran, Caleb I. Fassett, Harald Hiesinger, Katherine H. Joy, Sara Mazrouei, Alexander Nemchin, Gregory A. Neumann, Marc D. Norman, Nicolle E. B. Zellner*

1. INTRODUCTION .....	374
2. THE BASIN-FORMING EPOCH: EVIDENCE FROM SAMPLES .....	374
2.1. Revisions to major basin ages during the “Late Heavy Bombardment” era .....	375
2.2. Evidence for earlier major impact events .....	378
2.3. Sample constraints from non-Apollo sources.....	380
2.4. Sources of lunar impactors .....	381
3. THE BASIN-FORMING EPOCH: STRATIGRAPHIC RELATIONSHIPS .....	383
4. DYNAMICAL MODELS FOR THE BASIN-FORMING EVENTS.....	385
5. POST-BASIN EPOCH TO PRESENT .....	387
5.1. Constraints from crater counting and rock breakdown .....	387
5.2. Lunar impact glass samples.....	388
5.3. Regolith breccias and solar wind implantation .....	389
5.4. Current meteoroid impact rate.....	389
6. SUMMARY AND FUTURE WORK .....	390
REFERENCES .....	392
APPENDIX—RECENT DEVELOPMENTS .....	400
REFERENCE.....	400

## 10

### The Lunar Cratering Chronology

*H. Hiesinger, C.H. van der Bogert, G. Michael, N. Schmedemann, W. Iqbal, S.J. Robbins, B. Ivanov, J.-P. Williams, M. Zanetti, J. Plescia, L. R. Ostrach, J.W. Head III*

1. INTRODUCTION .....	401
2. CRATER SIZE-FREQUENCY DISTRIBUTION MEASUREMENTS.....	402
2.1. Historic perspective .....	402
2.2. Saturation equilibrium .....	407
2.3. Chronology function.....	408
2.4. Radiogenic and exposure ages of samples from the landing sites.....	410
2.5. CSFD $N(1)$ ages of landing sites.....	410
2.6. Data presentation and estimation of cratering model ages .....	414
3. RECENT LUNAR AGE DETERMINATIONS .....	419
3.1. Major terranes.....	419
3.2. Basins and craters .....	425
3.3. Volcanic features.....	428
3.4. Tectonic features.....	431
4. IMPLICATIONS FOR LUNAR HISTORY AND EVOLUTION .....	432
4.1. Volcanism .....	432
4.2. Tectonism.....	434
4.3. Cataclysm .....	434
4.4. Recent impact rate .....	435
4.5. Interior/thermal evolution.....	436
REFERENCES .....	437

## Lunar Mare Basaltic Volcanism: Volcanic Features and Emplacement Processes

*James W. Head, Lionel Wilson, Harald Hiesinger, Carolyn van der Bogert, Yuan Chen, James L. Dickson, Lisa R. Gaddis, Junichi Haruyama, Erica R. Jawin, Lauren M. Jozwiak, Chunlai Li, Jianzhong Liu, Tomokatsu Morota, Debra H. Needham, Lillian R. Ostrach, Carle M. Pieters, Tabb C. Prissel, Yuqi Qian, Le Qiao, Malcolm R. Rutherford, David R. Scott, Jennifer L. Whitten, Long Xiao, Feng Zhang, Ouyang Ziyuan*

1. INTRODUCTION AND BACKGROUND .....	454
2. VOLCANISM AS A PROCESS IN THE EVOLUTION OF PLANETARY BODIES ...	455
3. DISTRIBUTION AND SETTING OF LUNAR MARE VOLCANISM.....	458
4. WHAT HAVE WE LEARNED ABOUT PROCESSES OF BASALTIC MAGMA GENERATION, ASCENT AND ERUPTION? .....	466
4.1. Magma buoyancy .....	466
4.2. Magma positive excess pressures .....	466
4.3. Magma body excess pressure .....	467
4.4. Dikes, intrusions and eruptions: Magma bodies at/near the base of the crust...	468
4.5. Dikes, intrusions and eruptions: Magma bodies deep in the mantle .....	468
4.6. Implications for the vertical extent of magma source regions.....	468
4.7. Pressure gradient driving magma flow .....	469
4.8. Lava volume eruption rates .....	469
5. LUNAR VOLCANIC LANDFORMS AND IMPLICATIONS FOR MAGMA ERUPTION CONDITIONS .....	469
5.1. Dikes that propagate to the near-surface and stall .....	470
5.2. Dikes that propagate to the near-surface and intrude sills.....	470
5.3. Dikes that propagate to the surface and produce regional pyroclastic deposits	471
5.4. Dikes that propagate to the surface and produce effusive eruptions .....	473
6. RECENT OBSERVATIONS OF LUNAR MARE FEATURES AND IMPLICATIONS FOR ERUPTION CONDITIONS.....	476
6.1. Irregular Mare Patches (IMPs) .....	476
6.2. Ring Moat Dome Structures (RMDS).....	479
7. ESTABLISHING THE RELATIONSHIPS BETWEEN MARE BASALT MAGMA GAS RELEASE PATTERNS AND THE NATURE OF INDIVIDUAL DIKE EMPLACEMENT EVENTS AND ERUPTIONS: A FRAMEWORK OF PREDICTIONS FOR TESTING IN THE FUTURE EXPLORATION OF THE LUNAR MARIA.....	480
7.1. Long lava flows.....	484
7.2. Sinuous rilles and their source depressions .....	485
7.3. Compound flow fields.....	485
7.4. Small shield volcanoes .....	486
7.5. Summit pit craters .....	486
7.6. Pyroclastic deposits and mantles .....	486
7.7. Pyroclastic cones .....	486
7.8. Irregular Mare Patches (IMPs) .....	486

7.9. Ring Moat Dome Structures (RMDS).....	487
8. LUNAR SECONDARY CRUST: SUMMARY, SYNTHESIS AND OUTSTANDING QUESTIONS .....	487
8.1. Duration of mare basalt volcanism and recent activity .....	487
8.2. Lunar mare basalt chronology, flux, and nearside–farside distribution.....	488
8.3. What is the general trend of lunar mare basalt extrusive volcanic flux? .....	489
8.4. What is the total duration of lunar secondary crustal formation and what is the influence of thermal and tectonic evolution?.....	490
8.5. Lunar secondary crust: Synthesis .....	490
8.6. Secondary crust: Major outstanding questions.....	493
8.7. How applicable to other terrestrial planetary bodies is the lunar model of secondary crust formation?.....	496
ACKNOWLEDGMENTS.....	497
REFERENCES .....	498
APPENDIX—RECENT DEVELOPMENTS .....	506
REFERENCES .....	507

### Lunar Meteorites

*Katherine H. Joy, Juliane Gross, Randy L. Korotev, Ryan A. Zeigler,  
Francis M. McCubbin, Joshua F. Snape, Natalie M. Curran, John F. Pernet-Fisher,  
Tomoko Arai*

1. INTRODUCTION .....	509
2. SAMPLE SUITE CONSTRAINTS .....	512
2.1. Source regions of the lunar meteorites .....	512
2.2. Timing of the ejection, transit, terrestrial residence times, and exposure ages ..	513
2.3. Hot- and cold-desert weathering effects .....	514
3. CLASSIFICATION.....	519
3.1. Basalt and gabbro meteorites.....	515
3.2. Basalt-rich breccia meteorites .....	516
3.3. Feldspathic breccia meteorites .....	518
3.4. Thorium-rich meteorites.....	519
4. SCIENCE FROM LUNAR METEORITES .....	519
4.1. New minerals and shocked minerals .....	519
4.2. Evolution of the lunar highlands .....	520
4.3. Metamorphism in highland meteorites .....	521
4.4. Volcanic history and heterogeneity of the lunar mantle .....	523
4.5. Lunar volatiles from lunar meteorites .....	526
4.6. Impact history of the Moon from lunar meteorites .....	528
5. FUTURE PERSPECTIVES.....	529
ACKNOWLEDGMENTS.....	531
NOTES.....	531
REFERENCES .....	551

## The Dust, Atmosphere, and Plasma at the Moon

*William M. Farrell, Jasper S. Halekas, Mihaly Horányi, Rosemary M. Killen, Cesare Grava, Jamey R. Szalay, Mehdi Benna, Pamela E. Clark, Michael R. Collier, Anthony Colaprete, Jan Deca, Richard C. Elphic, Shahab Fatemi, Yoshifumi Futaana, Mats Holmström, Dana M. Hurley, Georgiana Y. Kramer, Paul R. Mahaffy, Masaki N. Nishino, Sarah K. Noble, Yoshifumi Saito, Andrew R. Poppe, Kurt D. Retherford, Xu Wang, Shoichiro Yokota*

1. INTRODUCTION .....	564
2. DRIVERS OF THE NEAR-LUNAR SPACE ENVIRONMENT.....	565
2.1. Solar radiation .....	565
2.2. Meteoroid environment .....	566
2.3. Solar wind.....	567
3. THE MOON'S RESPONSE TO THE DRIVERS .....	568
3.1. Neutral exosphere .....	568
3.2. The dust exosphere .....	575
3.3. Space plasma interactions.....	582
4. NEW TOPICS AND ADVANCES .....	589
4.1. LADEE and the renewed appreciation of meteoric control of the exosphere ....	589
4.2. The hydrogen and water cycles .....	590
4.3. Laboratory studies of dust, plasma, and exosphere formation .....	591
5. FUTURE DIRECTIONS AND CONCLUSIONS.....	594
5.1. Cubesat missions .....	594
5.2. Polar volatile exploration from orbit and the surface .....	595
5.3. Surface measurements within non-polar special regions .....	596
5.4. Networks .....	596
5.5. Summary .....	597

## Space Weathering At The Moon

*Brett W. Denevi, Sarah K. Noble, Roy Christoffersen, Michelle S. Thompson, Timothy D. Glotch, David T. Blewett, Ian Garrick-Bethell, Jeffrey J. Gillis-Davis, Benjamin T. Greenhagen, Amanda R. Hendrix, Dana M. Hurley, Lindsay P. Keller, Georgiana Y. Kramer, David Trang*

1. INTRODUCTION .....	611
2. SPACE WEATHERING PROCESSES AND THEIR MANIFESTATION IN LUNAR SAMPLES.....	613
2.1. Energetic charged-particle radiation.....	614
2.2. Micrometeoroid impacts.....	617
3. REMOTE SENSING OBSERVATIONS OF THE EFFECTS OF SPACE WEATHERING .....	620
3.1. New observations of lunar surface maturity .....	622
3.2. Special lunar environments .....	626

4. LABORATORY ANALOG STUDIES .....	633
4.1. Micrometeoroid bombardment simulation—laser studies .....	634
4.2. Laboratory impact studies .....	634
4.3. Solar wind simulation—ion irradiation studies .....	635
5. DISCUSSION .....	637
5.1. Current knowledge of space weathering rates .....	637
5.2. Current understanding of the relative roles of micrometeoroid impacts and solar wind irradiation .....	638
6. FUTURE ADVANCES IN SPACE WEATHERING .....	641
REFERENCES .....	643

### **Lunar Surface Processes**

*J.B. Plescia, J. Cahill, B. Greenhagen, P. Hayne, P. Mahanti, M.S. Robinson,  
P.D. Spudis, M. Siegler, A. Stickle, J.P. Williams, M. Zanetti, N. Zellner*

1. INTRODUCTION .....	651
2. REGOLITH STRUCTURE .....	652
2.1. Vertical characterization .....	653
2.2. Lateral characterization .....	656
3. REGOLITH PROPERTIES .....	660
3.1. Physical properties .....	660
3.2. Thermal properties .....	666
3.3. Electrical properties .....	667
4. FORMATION AND EVOLUTION .....	668
4.1. Thickness .....	669
4.2. Regolith growth and overturn .....	671
4.3. Rock lifetime .....	673
4.4. Topographic evolution .....	676
5. POLAR REGOLITH .....	678
6. OUTSTANDING QUESTIONS .....	679
REFERENCES .....	681

## 16

### **Tectonics of the Moon**

*Amanda L. Nahm, Thomas R. Watters, Catherine L. Johnson, Maria E. Banks,  
Carolyn H. van der Bogert, Renee C. Weber, Jeffrey C. Andrews-Hanna*

1. SUMMARY .....	691
2. INTRODUCTION AND MOTIVATION .....	692
3. NEW GLOBAL DATASETS FOR TECTONIC STUDIES .....	693
4. TECTONIC STRUCTURES .....	694
4.1. Lobate scarps .....	694
4.2. Wrinkle ridges .....	697
4.3. Large-scale graben and extensional structures .....	701
4.4. Small-scale graben .....	706
4.5. Structures without surface expressions .....	708

4.6. Lunar seismicity .....	710
5. TIMING OF TECTONIC STRUCTURE FORMATION .....	712
5.1. Relative ages of structures .....	712
5.2. Absolute ages from crater counting .....	713
6. IMPLICATIONS OF TECTONIC STRUCTURES FOR GLOBAL AND REGIONAL EVOLUTION MODELS .....	714
6.1. Models for regional tectonic stresses .....	715
6.2. Global tectonic models .....	716
7. CONCLUSIONS AND OUTSTANDING QUESTIONS .....	719
ACKNOWLEDGMENTS .....	720
REFERENCES .....	720

# 17

## Endogenous Lunar Volatiles

*Francis M. McCubbin, Jessica J. Barnes, Peng Ni, Hejiu Hui, Rachel L. Klima,  
David Burney, James M. D. Day, Tomáš Magna, Jeremy W. Boyce, Romain Tartèse,  
Kathleen E. Vander Kaaden, Edgar Steenstra, Stephen M. Elardo, Ryan A. Zeigler,  
Mahesh Anand, Yang Liu*

1. INTRODUCTION .....	729
2. METHODS AND DATA: ABUNDANCES .....	733
2.1. Apatite .....	733
2.2. Nominally anhydrous minerals (NAMs) .....	736
2.3. Mineral-hosted melt inclusions .....	738
2.4. Glass beads, interstitial glass, and mesostasis glasses .....	741
3. METHODS AND DATA: STABLE ISOTOPES .....	742

### Surface Volatiles on the Moon

*Dana M. Hurley, Matthew A. Siegler, Joshua T. S. Cahill, Anthony Colaprete, Emily Costello, Ariel N. Deutsch, Richard C. Elphic, Wenzhe Fa, Cesare Grava, Paul O. Hayne, Jennifer Heldmann, Amanda R. Hendrix, Andrew P. Jordan, Rosemary M. Killen, Rachel L. Klima, Georgiana Kramer, Shuai Li, Yang Liu, Paul G. Lucey, Erwan Mazarico, Yvonne Pendleton, Michael Poston, Parvathy Prem, Kurt D. Retherford, Micah Schaible*

1. INTRODUCTION .....	788
1.1. Definition of volatiles .....	788
1.2. Old view of volatiles and recent developments .....	789
1.3. Significance of volatiles .....	791
1.4. Reservoirs of volatiles .....	791
2. QUANTIFYING PRESENT DAY VOLATILES.....	792
2.1. Abundance .....	793
2.2. Composition .....	796
2.3. Distribution.....	797
2.4. Physical form.....	800
3. VOLATILE SYSTEM.....	802
3.1. Impacts .....	802
3.2. Impact gardening.....	803
3.3. Charged particle irradiation.....	804
3.4. Outgassing.....	806
3.5. Thermal processes .....	808
3.6. Migration .....	810
3.7. Photodesorption/dissociation and electron-stimulated desorption.....	812
4. OUTSTANDING QUESTIONS AND DATA NEEDED.....	813
4.1. Inventory of lunar volatiles.....	813
4.2. Age of deposits .....	814
4.3. Relative importance of sources and sinks.....	815
4.4. In situ resource utilization and accessibility.....	815
4.5. Comparisons with analogous bodies .....	816
5. CONCLUSIONS.....	818

# 19

## Lunar Resources

*Ian A. Crawford, Mahesh Anand, Simeon Barber, Aidan Cowley, Sarah Crites, Wenzhe Fa, Jessica Flahaut, Lisa R. Gaddis, Ben Greenhagen, Junichi Haruyama, Dana Hurley, Claire L. McLeod, Andrew Morse, Clive R. Neal, Hannah Sargeant, Elliot Sefton-Nash, Romain Tartèse*

1. INTRODUCTION .....	829
2. OVERVIEW OF LUNAR RESOURCES .....	830
2.1. Major elements .....	830
2.2. Minor and trace elements .....	830
2.3. Water .....	832
2.4. Exogenously delivered materials .....	833
2.5. The bulk regolith .....	833
2.6. The lunar near-surface environment as a resource .....	834
3. LUNAR VOLATILES .....	835
3.1. Polar volatile deposits .....	835
3.2. Non-polar volatiles .....	837
3.3. Pyroclastic and other magmatic sources of volatiles .....	837
3.4. Solar wind and/or micrometeorite-derived volatiles .....	838
4. OXYGEN FROM SILICATE MATERIALS .....	840
5. METALS AND OTHER COMMON ELEMENTS .....	842
5.1. Metallic ores/deposits resulting from magmatic and hydrothermal processes .....	842
5.2. Fe, Al, Ti as residua from oxygen production processes .....	843
5.3. Silicon .....	843
6. RARE-EARTH AND ASSOCIATED ELEMENTS .....	844
6.1. Lunar REE mineralogy and chemistry .....	845
6.2. Lunar U and Th distributions .....	845
7. LUNAR RESOURCES DERIVED FROM ASTEROIDAL AND METEORITIC SOURCES .....	847
8. BULK REGOLITH AS A RESOURCE .....	848
9. THE LUNAR ENVIRONMENT AS A RESOURCE .....	850
9.1. Quasi-permanent sunlight .....	850
9.2. Permanent shadowed regions as a resource .....	850
9.3. Vacuum as a resource .....	850
9.4. Lava tubes .....	851
9.5. Mini-magnetospheres .....	851
10. NEXT STEPS IN LUNAR RESOURCE CHARACTERIZATION .....	852
10.1. Distinguishing between resources and reserves .....	852
10.2. Orbital remote sensing .....	853
10.3. <i>In situ</i> surface measurements .....	854
10.4. Synergies with human exploration .....	855
11. THE INTERNATIONAL AND LEGAL CONTEXT .....	855
12. SUMMARY .....	857
ACKNOWLEDGMENTS .....	857
